

FOR IMMEDIATE RELEASE

Unique 3D note-taking tool debuts at LearnLaunch Conference

LearnLaunch Conference, BOSTON, MA, January 23, 2015 – Tech startup SpatialNote debuts with its innovative 3D note-taking application at the LearnLaunch conference in Boston, MA, on January, 23-24. Just a few days prior to the conference, SpatialNote.com went live in a public Beta.

SpatialNote is a web-based unique 3D knowledge management and sharing solution that uses innate human abilities such as embodied cognition and spatial memory to transform information into long-term knowledge. The founders aim to take on the traditional note-taking tools, such as whiteboards and sticky notes, and their digital analogs. SpatialNote co-founder and CEO Vlad Babarykin believes that spatial note-taking is a significant breakthrough that can change the way people learn.

SpatialNote is intuitive; it does not require any special skills, just basic web intelligence. The team has empirical evidence of improved memorization, and positive feedback from participants of the private alpha-testing.

###

About SpatialNote

SpatialNote is a tech start-up, currently the team of 10, with headquarters in Boston, MA, and a development office in Minsk, Belarus. The core of the team has been working together for 10 years, united by enthusiasm, ideas, and thirst for knowledge.

About LearnLaunch Conference Across Boundaries

The purpose of Across Boundaries is to promote dialogue about digital learning. The 3rd annual conference will examine how the most promising digital tools are being implemented in educational settings to increase student learning. The conference brings together a diverse set of voices to discuss the most challenging questions facing the edtech industry today.
